

SERVICES BRIEF

Proven Path: Venafi Platform Health Check

Guide and Optimize Your Venafi Platform Implementation with this Venafi Professional Services Offering

Venafi Professional Services Proven Path: Venafi Platform Health Check

With Proven Path: Venafi Platform Health Check, customers currently using the Venafi Platform are assisted by Venafi experts to conduct a system health check and develop Customized Maturity Goals and Strategy.

Why Customers Purchase Professional Services¹

1. Designed for optimum solution effectiveness
2. Customized integration
3. Reduced deployment time
4. Minimized deployment risk

Advantages of Using Proven Path

- Proven methodology based on over a decade of experience
- Access to best practices
- Accelerated time to value
- Opportunity to use Venafi team members or certified partners
- Flexibility to select on-site and remote options

50% Faster

The majority of customers who use Venafi Professional Services speed up their implementations by over 50%.²

Optimize Your Health Check and Improve Security

Is your Venafi Platform performing at its peak? Have you taken advantage of built-in options to organize your solution and reduce overhead? We can help you to maximize these benefits.

Over time, operational security processes that organizations implement for managing their machine identities can become outdated and less efficient as networks continue to evolve. In a continuous security model, the organization's policies, processes and procedures need to be reviewed and updated regularly to keep up with new and emerging threats. In most Venafi Platform environments, current processes and procedures can be updated to take advantage of new, or underutilized, product capabilities that would result in reduced risk.

For customers currently using the Venafi Platform, Venafi Professional Services offers this platform health check service to show customers where they can extract more value from their investment and ensure the Venafi Platform is optimized to improve security and avoid outages. The result of this service will be Customized Maturity Goals and Strategy, that outlines any platform or process changes necessary to better support identified critical use cases.

In a continuous security model, organizations' policies, processes and procedures need to be reviewed and updated regularly to keep up with new and emerging threats.

Six Steps of the Venafi Platform Health Check

1. Advisory Workshop

A Venafi consultant leads a remote, half-day Advisory Workshop with key stakeholders to gather and understand pain points within the current solution and record any new or additional use cases not currently being addressed.

2. Platform Environment Review

Using the information gathered during the Advisory Workshop, the Venafi consultant will review and evaluate the processes for service availability, failover, redundancy and disaster recovery as they relate to the operations of the Venafi Platform.

3. Platform Process Review

The Venafi consultant will then review and evaluate the current Venafi Platform configuration (policy, identity, rights, credentials) to ensure it supports the customer's current and newly identified processes.

4. Final Deliverable Creation

The Venafi consultant will create a report detailing any gaps or risks identified during the review and provide detailed recommendations for additional configuration or process changes that will minimize the gaps and reduce any associated risk.

5. Venafi Platform Upgrade

Recognizing that many suggested changes to the solution will require the latest version of the Venafi Platform, the consultant will work with the customer to perform a platform upgrade to the most current release.

6. Venafi Platform Test Plan

The Venafi consultant will develop and document a systems test plan that can be leveraged by the application team. This will validate any changes to the platform as suggested by the Customized Maturity Goals and Strategy.

The Venafi Professional Services offering, Proven Path: Venafi Platform Health Check, is available to existing Venafi customers. It ensures that your Venafi Platform deployment is optimized and working properly and all systems are optimized to work together. As a fixed-rate, fixed-outcome offering, with an easily scheduled engagement, purchasing the Proven Path:

Venafi Platform Health Check takes the risk out of your budgeting and planning.
